DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/4/2005 has been entered.

Response to Amendment

2. Applicants' amendments filed on 4/4/2005 have been entered.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-6 and 23-24 stand provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-6 and 26-27 of

copending Application No. 10/640,047. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claimed invention in both applications recites a porous body comprising a plurality of pores and a region of amorphous surrounding them. The shape of the pores in the '047 application is pillar-shaped which is considered the same or very closely similar to the columnar pores recited in the claims of present application. The amorphous surrounding region in the '047 application contains oxide, which is encompassed by the limitations of the amorphous region recited in the present application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 and 5-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Chooi et al. (US 6, 265,321).

Chooi discloses an integrated circuit device comprising a semiconductor substrate, interconnection lines covered with liner layer made of silicon or silicon oxide (col. 4, lines 1-20), and a plurality of pillar or column- shaped pores (see Fig. 1) between the interconnection lines. The direction of the depth of the pores is substantially perpendicular relative to the substrate.

Chooi also discloses that the interconnection lines comprising aluminum (col. 4, lines 1-10).

Response to Arguments

5. Applicant's arguments filed 4/4/2005 have been considered but are moot in view of the new ground(s) of rejection.

The provisionally obviousness-type double patenting rejection is maintained in view of the new ground(s) of rejection stated above.
